[358]

The third Remark is, the Reason that invites Thrushes or Starlings under the Legs of black Cattle grazing in a Pasture. Not being able to get near them, I observed them at a Distance with a good Glass. I saw all these Birds thrust their Head and half their Body down into the Grass, in such manner that their Tails remained erect in the Air, as that of a Duck upon diving; which makes me think, that those Birds seek after Worms in the Earth; and that they gather about the Cattle, because as they are large Animals, upon trampling on the Ground, they oblige such Worms to come forth, as happen to be press'd under the Weight of their Hoofs.—I shall be glad of every Opportunity of convincing you how much I respect you, and am,

Your most humble, and most obedient Servant,

Pluche.

XIX. A Letter from John Bartram, M. D. to Peter Collinson, F. R. S. concerning a Cluster of small Teeth observed by him at the Root of each Fang or great Tooth in the Head of a Rattle-Snake, upon dissecting it.

Mr. Collinson, Philadelphia, July 17. 1734.

I EAR German-town, about fix Miles from this City, we found a Rattle-snake, which is now become a Rarity so near our Settlements. I took it home,

[359]

home, and diffected it: In the Head I met with what has not been observed before by any, that I can remember—that is, a Cluster of Teeth on each Side the upper Jaw, at the Root of the great Fangs, through which the Poison is ejected.—I observed, in the same Case, that the two main Teeth were sheathed in, lay four others at the Root of each Tooth, in a Cluster together, of the same Shape and Figure with the great ones—and I am apt to think for the same Use and Purposes, if by Accident the main Teeth happen to be broken—as was the Fellow to this that I send you.—May not these Cluster of Teeth be placed to supply such a Defect successively—for the Support and Desence of this Creature?

I am not certain whether this is an uncommon Case; perhaps others have not dissected the Head of this Animal with the Care that I have done.—

I am yours,

John Bartram.

XX. Notices of some Meteors observed at Philadelphia in North-America by Joseph Breintnall, extracted out of a Letter from bim to Peter Collinson, F. R. S.

Philadelphia, May 9. 1738-

HE remarkable Aurora Borealis, that was feen in Europe the Beginning of last December, was not feen here.
